

Tooth wear and the application of contemporary occlusal principles in restorative management

Friday 7 November 2025 | 09:00-16:30

5 hours CPD

Development
outcome

Join us for this one-day event and discover the causes, diagnosis and management of tooth wear, with a focus on modern occlusal concepts and their role in restorative rehabilitation.

Aim

To enhance clinicians' understanding of the aetiology and clinical assessment of tooth wear and to provide a structured approach to its restorative management, using evidence-based occlusal principles.

Learning objectives

- Identify types of tooth wear
- Understand diagnostic and risk assessment protocols
- Apply contemporary occlusal principles in planning and executing restorative treatment.
