PROGRAMME

Orthodontic management of hypodontia

Speaker: Paul Murphy

Aim

Participants will gain specific insights into complex orthodontic issues such as the management of spaces and precise control of tooth movement.

Learning objectives

- Understand multi-disciplinary diagnosis and apply principles to real cases
- Understand treatment mechanics
- Understand the collaboration with the restorative dentist
- Understand retention planning.

Learning content

Empowering clinicians to diagnose and plan complex multi-disciplinary cases using appropriate biochemical principles.

Development outcomes: C, D

CPD hours: 1 hour

Restorative management of patients with hypodontia

Speaker: Martina Hayes

Aim

This lecture will describe the prevalence of hypodontia, and the treatment options for replacement of missing teeth, retained deciduous teeth, and microdontic teeth.

Learning objectives

- To be alert for early diagnosis of hypodontia
- To be aware of management of the deciduous dentition in the hypodontia patient
- To know common treatment options for patients with hypodontia
- To know how to maximise your outcomes with communication with other professionals.

Learning content

This lecture describes presentations of hypodontia, associated dental manifestations, and the communication needed with other dental professionals to optimise the restorative outcomes.

Development outcomes: A, C, D

CPD hours: 1 hour

Joint Q&A session

CPD hours: 15 minutes
